Continuation of Substance of Interview including description of the general nature of what was discussed: It was agreed that the top plate should be further recited as being connected directly to the sole plate so as to clarify the location of the top plate relative to the sole plate, since at least one opening in the top plate and at least one opening in the rear portion of the sole plate are covered by the same composite cover. Further changes were agreed upon in order to correct some apparent grammatical inconsistencies, i.e. correcting "hozel" to read --hosel-- (claims 1, 4, 7 and 12) and to further eliminate any indefiniteness that might have otherwise been present with the language "similar" (claims 5, 6, 10 and 11).

Further, the newly cited reference to CHUANG was discussed and it was agreed to further amend the claim language to clarify that the top plate is continuously and directly connected to the rear portion of the sole plate so as to distinguish over the upper rim portion (27) shown by Chuang, wherein the rim portion is discontinuous as a result of the gaps (28).
